Data Analytics and use of ICT in Government

Total Sessions – 40

Objectives

We live in the Information Age where data is the lifeblood of organisations. Over the past two decades, the IT systems implemented by various Government organisations have accumulated huge volumes of data. While the systems themselves have led to improved transaction processing, the opportunity of mining this data through advanced data analytics for obtaining critical insights leading to radically improved service delivery and monitoring is yet to be realised. This course would give a firm grounding on fast developing field of Analytics and prepare the Officer Trainees for data-driven decision making capability.

The course would cover crucial concepts of descriptive statistics and Data Visualisation with hands on training on leading Visual analytics tool – Tableau Desktop for data discovery and smart MIS. The program would also cover advanced analytics (Machine Learning / Data Mining) including building of predictive analytics models using R and RapidMiner, and provide an overview of Big Data technologies.

In addition, participants would be exposed to IT Governance and Management Framework, overview of Cyber Security, and recent developments in Banking Technology

Unit-1: Basics of Data and its Management

- Handling data , Data Cleaning and Transformation
- Understanding variables and Observations, Types of Variables, Central Tendency, Distribution of the Data, Confidence Intervals, and Hypothesis Tests.
- Use of MS Excel and MS Access for data management, basic data analysis, cleaning and transformation.

Unit-2: Visual Analytics

- Types of Data Visualisation
- Basics of Power BI
- Use of Tableau Desktop for Visual Analytics/Data Discovery and developing smart MIS using Dashboards.

Unit-3: Machine Learning and Data Mining

- Understanding Machine Learning and Data Mining algorithms relating to Classification, Regression, Clustering, Anomaly Detection, Time Series, Association Analysis
- Neural Network algorithms, Deep Learning and Reinforcement Learning
- Use of R and RapidMiner for predictive analytics.

- Overview of Big Data Technologies

Unit-4: IT Governance and Management Frameworks, e Governance and Cyber Security overview

- ISO/IEC 38500:2015- Governance of IT for the organization, COBIT 5 , ISO/IEC 27001 - Information security management
- E-Governance
- Cyber Security
- Developments in Banking Technology

Contemporary Issues in GST and Gender Based Budgeting

Total Sessions – 40

OBJECTIVE

The Government of India is committed to replace all the indirect taxes levied on goods and services by the Centre and States and implement GST w.e.f. April 2017. With GST, it is anticipated that the tax base will be comprehensive, as virtually all goods and services will be taxable, with minimum exemptions. GST has been envisaged as an efficient tax system, neutral in its application and distributionally attractive.

Gender Budgeting is about viewing the budget through the gender prism, it is about taking into consideration the differentiated needs of everyone – women, men, girl and boys. It is basically about investing in gender equality and women empowerment. Based on the above, after assessment of critical areas of concern in different states it is proposed to identify sectorial priorities and how gender budgeting can be leveraged towards improving in these areas.
